Lot Pro

Snowplow

The Meyer® Lot Pro™ is the perfect choice for professional snow removal contractors, as well as municipalities, offering precision-engineered performance for clearing large parking lots and city streets swiftly and effectively. The Lot Pro is available in a variety of sizes for light and medium-duty trucks and utility vehicles. Its design and user-friendly features make for hassle-free plowing, even in the toughest winter conditions.

Highlights

- Available in a **variety of sizes for use with most ¾-ton + or ½-ton trucks**
- **Tallest moldboard** in its class
- **75-degree attack angle** for better overall snow clearing and superior back-dragging

Your benefits

- **Efficient:** better and more efficient snow removal in practically all conditions.
- **User-Friendly:** self-diagnostics and hands-free plowing lets users safely focus on the task at hand without interruptions.
- **Maneuverable:** nimble plowing without compromising on effectiveness.

Performance features

Plow blade

Lot Pro plows are available in a variety of lengths to seamlessly mount on ¾-ton and larger trucks. With a 32" moldboard and aggressive 75° angle of attack, the Lot Pro is the partner to clear those large parking lots when the call for service comes in. Available in steel or roto-molded poly.

Lot Pro LD model is specifically designed for ½-ton pickup trucks equipped with a snow plow prep package. Its 7.5'1 x 28" h steel moldboard and 75° attack angle giving residential contractors a lightweight, commercial grade snow removal tool.

Mounting System

The Lot Pro series comes in two mounting systems, EZ-Mount Plus, and Pro Mount:

- The **EZ-Mount Plus** offers a pistol-grip or joystick controller, a one-plug connection, and interchangeable controllers for companies running a fleet of plows.
- The **Meyer Pro Mount** attachment system was designed to be easy to use. In fact, the **hydraulic switch simplifies attaching and detaching the blade**, requiring less precise alignment between the plow and the truck.
- The spring tension release latches allow quick and easy mounting or dismounting of the blade from Meyer's renowned truck mount and clevis, all from the side of the plow.
- The Pro Mount eliminates the need for lifting chains, which reduces the need for replacement parts, and industry-standard power components feature automotive-style connectors for increased reliability.
- The Pro Mount boasts a solid cylinder that stays rigid during use, minimizing the bouncing that can damage both the plow and the truck, and ensures the appropriate downward pressure for superior plowing and back-dragging capabilities.
