

Super Blade

Snowplow

The Meyer® Super Blade™ is not just a snow plow, it's a versatile solution designed for commercial-grade snow removal. With the touch of a button, it can transform from 8-feet to 10-feet 6-inches wide, providing unmatched flexibility for plowing both narrow areas or expansive lots. Available for ¾-ton and larger pickup trucks, the Super Blade is your go-to partner for efficient and reliable snow removal.

Highlights

- Available in a **variety of sizes for use with most ¾-ton and larger trucks.**
- **Flexible wings** can be independently extended or retracted to **deliver unmatched adaptability**
- **Tubular steel A-frame construction** provides durability and added strength to critical impact areas.
- Nite Saber® LED lights offer **superior visibility during the darkest nights.**

Your benefits

- **User-Friendly:** Self-diagnostics and hands-free plowing let users safely focus on the task at hand.
- **Efficient:** Designed for better and more efficient snow removal in practically all conditions.
- **Maneuverable:** Nimble plowing without compromising on effectiveness.
- **Peace of Mind:** Rest easy with our industry-leading 5-year warranty, the best in the business

Performance features

Plow blade

The Meyer Super Blade offers industry-leading ground clearance, heavy-duty 2-inch x 10-inch rams, and the largest lift ram in the industry, measuring 2-inches x 9-inches. Together, they provide precise and efficient angle adjustments and easy and seamless elevation of the blade during plowing operations.

The Super Blade is built using slot and tab construction for a sturdy and precisely fitted plow. Steel components are laser-cut and assembled by robotic welders, ensuring reliability throughout years of service. The plow features six trip springs, expandable to eight, providing flexibility to customize the plowing approach according to your specific requirements.

The Super Blade combines innovative design and durability through its tubular pivot bar, featuring a heavy-duty center support along the entire length of the plow's critical snow impact zone. Reinforced outer wings feature continuously-welded ribs, which enhance the plow's strength and performance, allowing you to confidently tackle the most challenging plowing tasks.

The Super Blade is coated with the exclusive Meyer® Dura-Slick™ coating, an automotive-inspired finish infused with Teflon® that is baked onto the steel and ensures durability and optimal snow rolling and throwing action.

Operating system

The Super Blade's Standard Operating System features a streamlined, encased power unit and patented cable management system for reliable service. The hydraulic system offers adjustable drop speed, accommodating various plowing conditions and operator preferences.

The pistol grip controller offers real-time diagnostics, seamless wing movement (allowing you to stop at any point), and a hands-free plowing mode using the shift lever. A simple double-click on the button will prompt the moldboard to complete the movement without requiring the driver to continuously press or hold the button.

Nite Saber LED lights come standard, enhancing night vision for safe and productive operation. Choose the Meyer Super Blade for unmatched performance, durability, and flexibility in commercial snow removal.
